

# Discovery how our seamless epoxy flooring created a sanitary, safe environment for Animal Medical Professionals Veterinary Clinic.

## Animal Medical Professionals Needed A Flooring Solution That Was Safe & Sanitary

### A safe and sanitary veterinary clinic starts from the floor up

When we were contacted by the dedicated team at Animal Medical Professionals (AMP) in Tennessee, we were keen to demonstrate how an Everlast Epoxy resin floor would benefit their clinic. Read our latest case study to discover how the installation of our seamless, non-porous resin floor created a warm, welcoming environment for both animals - and their caring owners.

**The United States is a nation of animal lovers, with 70% of households\* owning a pet and wanting the very best for them should they need to visit a veterinary clinic.**

### Problem:

The Previous Flooring at AMP was Finished Concrete That Started to Peel and Crack. The Gaps That were Beginning to Appear On the Surface Provided the Perfect Place for Dirt, Debris and Bacteria to Hide

### Solution:

Install an Everlast® Epoxy Floor for a Watertight Floor with a Seamless Surface and EPA-Registered Antimicrobial Component to Inhibit Bacteria Growth

### Results:

A Safe, Seamless, Watertight Flooring that Meets the Daily Demands of a Busy Veterinary Practice

## **The project demanded a flooring solution that would be Durable, Watertight, Safe and Sanitary**

The previous flooring at AMP was finished concrete, and the team admitted that while they liked the look of the floor, it had started to peel and crack. The gaps that were beginning to appear on the surface provided the perfect place for dirt, debris and bacteria to hide.

The cracks also caused further issues as the surface was no longer watertight - allowing liquids to seep into the substrate and into the baseboards.

Aside from the structural issues caused by a failing concrete floor, a cracked and peeling surface will not create the warm, welcoming impression that the staff at AMP pride themselves on.

**It was time to address the problem and invest in a new, seamless, non-porous surface that met all the demands of a busy animal care facility.**

Durability was also a key concern for AMP, as paws, claws and constant foot traffic can cause wear paths to form on some surfaces.

**Our floors are laid to a depth of 160mm - unlike many other resin floors which are just 60mm deep, meaning our thick, flexible system met the brief of withstanding daily abuse without looking worn or tired.**

**"We chose an Everlast Epoxy resin floor, as we required a waterproof, sealed and durable floor - and after installation we know we'd made the right choice. Our new floor is just what we needed and I would have no hesitation in using the experts at Everlast Epoxy for future projects." - Emily Daniel**

## **Everlast Epoxy flooring provided a seamless, watertight surface, ensuring no liquids would seep into substrate.**

During our initial consultation with the AMP team, it became very apparent that their key requirement for the new flooring installation was a sealed floor without any cracks or crevices.

When pets are poorly or feeling nervous, little accidents can happen, but a watertight floor allows for any liquids to be cleaned without seeping into the substrate.

## **A sanitary surface suitable for a Veterinary Clinic.**

Another advantage for the AMP team was that Everlast resin floors are formulated with an EPA-registered antimicrobial component to inhibit the growth of bacteria and protect the flooring from the spread of microbes.

“

We previously had a finished concrete floor at the practice, and while we liked it, the surface was cracking and peeling - and it wasn't waterproof with the baseboards. We like that the seamless Everlast floor ensures that there are no cracks or crevices for liquids to penetrate.”

- Emily Daniel, Animal Medical Professionals

”

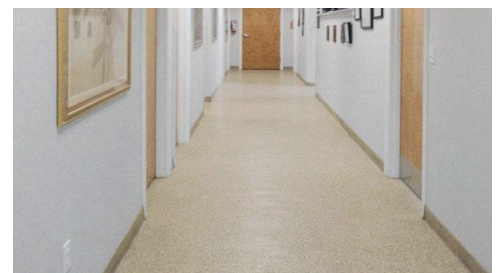

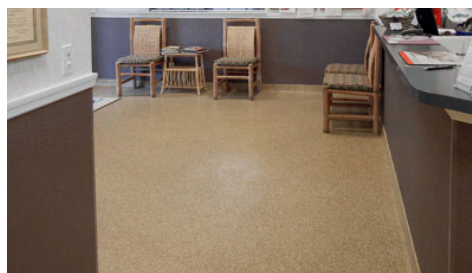

“

We are delighted that the good people at AMP are thrilled with their new Everlast floor. We've supported many veterinary practices across the US with the provision of seamless, non-porous surfaces that effortlessly copes with the daily demands of a busy animal care facility.

- David Linton, Everlast Epoxy
